course. BOOKMARKS: 00:00 What is in this lecture about; ...

What is in this lecture about; high temperature corrosion will be skipped

Lecture notes chapter 5. Difference of (a) thermodynamic, (b) kinetic, and (c) barrier
methods of corrosion protection

Sacrificial anodes

ICCP (impressed current cathodic protection) - using an electrical power source and
a driven anode to cathodically protect a metal (e.g. steel) driven anode

Costs / disadvantages of ICCP

Stray current corrosion

Guadalajara sewer explosion (attributed to stray current corrosion)

Anodic protection (protecting some metals, like steel, by applying a high - or 'anodic'
- potential!)

Corrosion inhibitors - a kinetic approach to corrosion protection.

Cathode inhibitors for oxygen

Adsorption type inhibitors (e.g. amines)

Anode inhibitors (slowing down the active corrosion anode by providing an
alternative anode reaction, e.g. the formation of a passive oxide)

Oxygen scavengers (a type of environment modification, but one which slows down
corrosion kinetics by lowering the rate of oxygen supply by lowering its bulk
concentration).
