Business continuity may be
defined as "the capability of an
organization to continue the
delivery of products or services
at pre-defined acceptable levels

following a disruptive incident",
and business continuity planning
(or business continuity and
resiliency planning) is the
process of creating systems of
prevention and recovery to deal
with potential threats to a
company. In addition to
prevention, the goal is to enable
ongoing operations before and
during execution of disaster
recovery. Business continuity is
the intended outcome of proper
execution of both business
continuity planning and disaster
recovery.

Several business continuity
standards have been published
by various standards bodies to
assist in checklisting ongoing
planning tasks.

Business continuity requires a
top-down approach...
